

Achieved 164.5% of Enrollment Goal and Ranked Among Top 10 Enrollers in a Phase 4 COVID-19 Vaccine Trial

Our Objectives

DelRicht Research was selected as a participating site network for a Phase 4 COVID-19 clinical trial evaluating the efficacy and safety of a subvariant COVID-19 vaccine. The study targeted healthy adults aged 50–64 whose last COVID-19 vaccination was administered at least 90 days prior to enrollment into the study.

- **Study Enrollment Goal:** 6,500 patients across 90 sites
- **DelRicht's Enrollment Goal:** 433 patients across 6 sites
- **Patient Population:** Adults 50–64 years old
- **Enrollment Period:** November 2025 – May 2026 (6 months)

Key Trial Challenges & Solutions

CHALLENGE

Heavy reliance on **eDiary data** for daily symptom tracking created challenges ensuring **consistent compliance**, **preventing missed entries**, and **technical support for digital tools for older, unfamiliar populations**.

HOW DELRICHT ADDRESSED

We established daily oversight, **real-time reminders**, **automated alerts, 24/7 support**, and **dedicated coordinators for follow up** of missed entries, resulting in an ePRO compliance rate within 0.8% of the studywide average.

Our Results

DelRicht's 6 participating sites **enrolled 713 patients**, achieved **164.5% of the target enrollment goal**, and **a 96.6% average retention rate**. In addition to efficient activation, **Dr. Jonathan Jacobs and Dr. Matthew Mintz were recognized among the Top 10 highest enrollers**. These enrollment milestones demonstrate DelRicht's ability to navigate restrictive eligibility and patient compliance without compromising enrollment performance and data integrity.
